

Struck

The seam is drawn the way a real ball's seam projects: one S curve across the face, and the far side of the same closed seam appearing as two strands inside the rims, all four ends aiming at the poles. One panel navy, one basil, with a flat shade on the lower-left so the ball sits as a sphere rather than a disc. The three trails are widest nearest the viewer and converge as they reach the ball — it is travelling away from you.

Seam

Four visible strands from one closed seam: the central S dividing the panels, and one strand inside each rim. Every gap is 3 units on a 36-unit radius. Never redraw the seam as a single centred line.

Depth

One shade step per panel across the lower-left third — two flat tones, never a gradient. Light always comes from the upper right.

One colour and small sizes

Below 32px, drop the shade and the trails: flat two-tone ball only. In one colour, drop the shade and let the seam gaps carry the form.
